

From prompt to final Canvas page

Eight iterations, seven prompts — how the page evolved from first draft to a constraint-verified page that survives Canvas's HTML sanitizer.

1. First draft
2. Content cleanup
3. Layout & brand exploration
4. Progress tracker redesign
5. First Canvas attempt
6. Constraint-compliant rebuild
7. Empty-element fix
8. Final, confirmed working

Content cleanup

1. Replace MATH 0120 with PRECALCULUS EXAM INFO
2. What are the five dots in the top right with the middle one colored in?
3. Remove the 4.6 and 5.4-5.5 slashes. Simply explain the exclusion in the what's covered paragraph.
4. Get rid of the x Graphing calculators"

AFTER — Stage 5: First Canvas attempt

Precision constraint compliance

"Before we build this, **some hard constraints** — confirmed by testing on our actual Canvas instance. When Canvas's Pages editor saves content, it strips <style> blocks, external font @import/<link> tags, <script> tags, and full-page wrapper tags. Only inline style=..." attributes on individual elements survive." Followed by 9 numbered build rules: no <style> block (every rule inline), no external fonts (system stack only), no CSS custom properties (hardcode values), no pseudo-classes (:hover, :focus-visible, etc. — static styling only), no @media queries (use auto-fit/minmax grids or flex-wrap instead), no <script>/JS, no <html>/<head>/<body> wrapper, whole-pixel values only, and verify by reloading the saved page rather than trusting the editor preview.

Full property audit + real content pass

A pasted copy of the live, saved HTML — showing both the user's own manual content edits made directly in Canvas (renamed sections, new study tips, a unit-circle note) and proof that font-weight, letter-spacing, text-transform, box-shadow, and box-sizing were all silently stripped on save, and that the progress dots were still missing even with the earlier guard in place.

"Great now refer to my updated TEXT for each section and make my edits to the correct html you just made."
